

## Exercise 2

Write a program that asks the user to type all the integers between 11 and 27 (both included) using a **for** loop.

```
int i, number;
for (i=11; i<=27; i++)
{
    cout << "Enter the number="
    cin >> number;
    if (number == i)
        {
            cout << number << endl;
        }
    else
        {
            cout << "wrong number type again" <<
endl;
            i--;
        }
}
```
